

Hospital Emergency Room Dashboard | Excel

Developed an interactive **Hospital Emergency Room Dashboard** to analyze patient visits and emergency-room performance using **Microsoft Excel**. The dashboard provides monthly and yearly insights into patient volume, waiting time, satisfaction score, admission status, gender distribution, age groups, patient attendance, and department referrals.

Key Features

- Analyzed **number of patients** and monthly patient trends.
- Monitored **average patient waiting time** and **satisfaction score**.
- Compared **admitted vs. non-admitted patients**.
- Analyzed patients by **gender and age group**.
- Examined **department referral patterns**.
- Created interactive **month and year filters**.
- Used charts, KPI cards, and visualizations to make hospital performance easier to understand.
